A.D.A.P.T.: Supplementary Figures

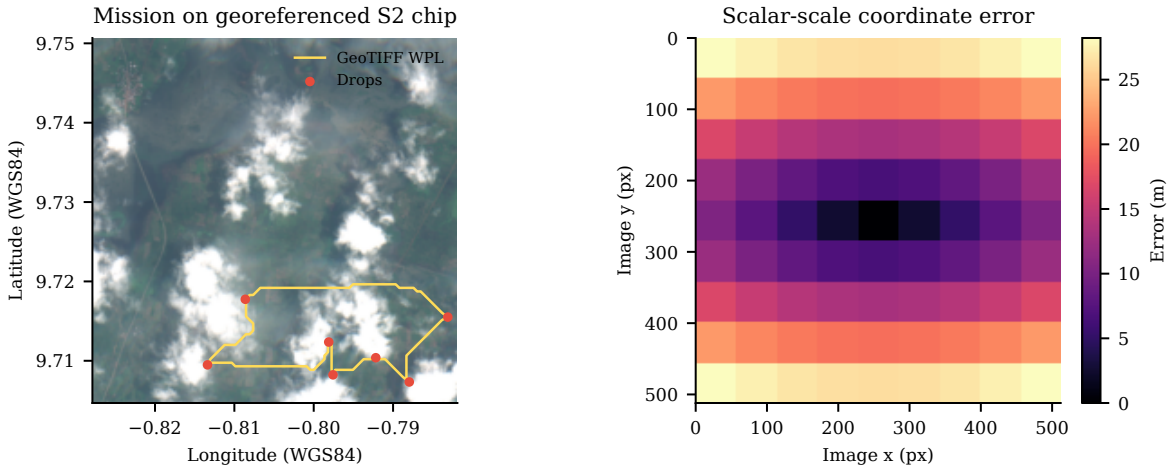

These figures accompany the existing journal manuscript. Each panel is generated from recorded experiment results; simulated operators and SITL are identified in the captions.

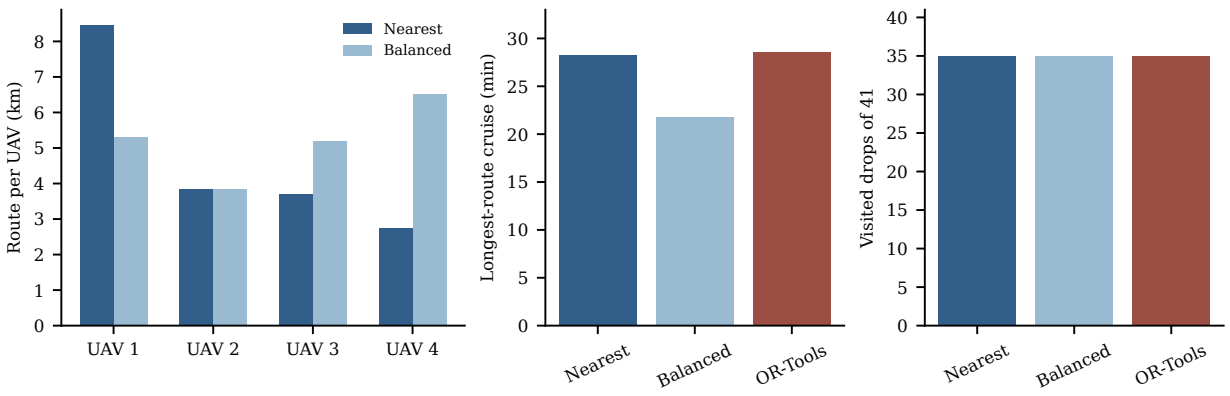

S1. Held-out Sen1Floods11 examples. The hand label is an evaluation target; S1 and S2 methods use different inputs.

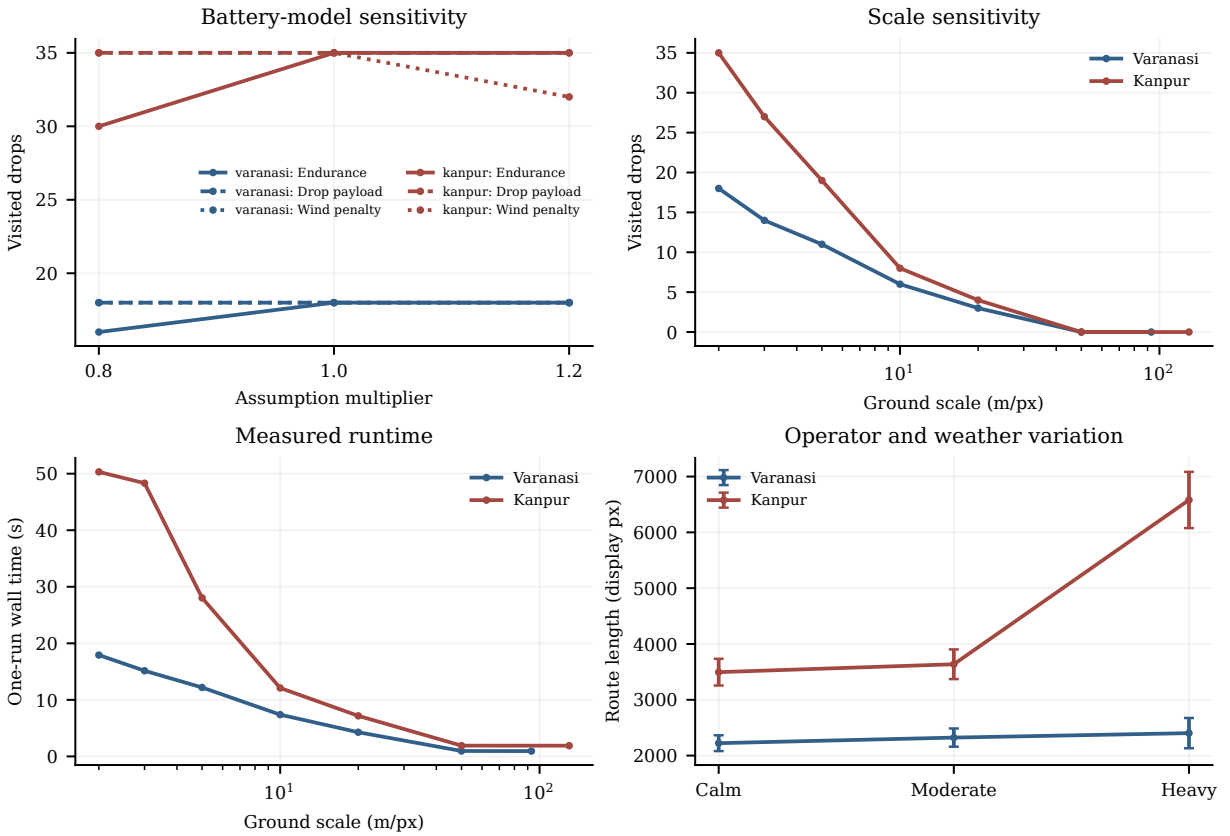

S2. Observed EMS flood progressions compared with the unchanged project proxy. Both comparisons tie persistence.

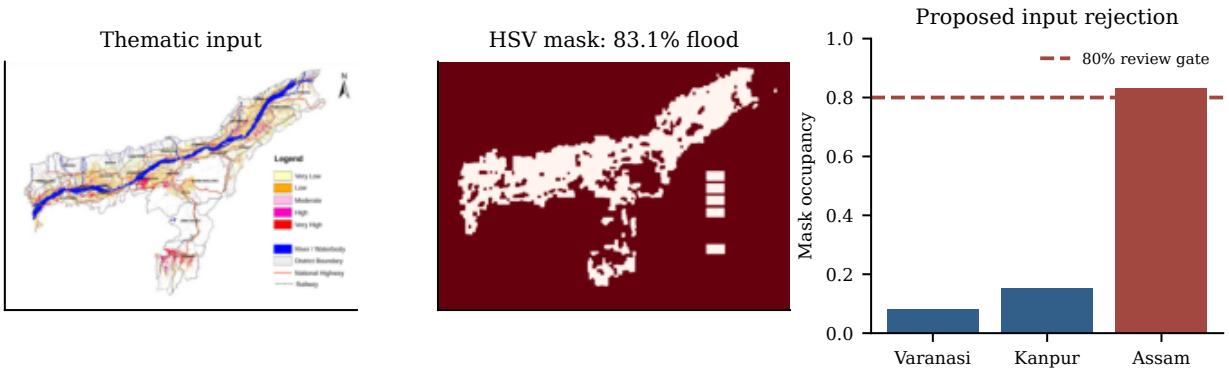

S3. Label-rendered diagnostic route on a co-registered satellite chip and scalar coordinate error. This is not flight validation.

S4. Nearest-feasible, balanced and OR-Tools allocation comparisons. Times are optimistic route-length/speed proxies.

S5. Battery-model, scale, runtime and simulated-operator/weather sensitivity.

S6. Assam thematic input, erroneous HSV flood mask and optional 80% rejection guard.

```
MAVProxy ground-station transcript (actual SITL session)
Loaded 364 waypoints in 0.67s
Sent all 364 waypoints
Got MISSION_ACK: TYPE_MISSION: ACCEPTED
STABILIZE> Have 364 of 364 waypoints
```

S7. Actual MAVProxy command-line ground-station transcript during the full WPL upload to ArduCopter SITL.
